

Proxy Voting Report

Period: July 01, 2023 - September 30, 2023

Votes Cast	305	Number of meetings	47
For	259	With management	259
Withhold	0	Against management	44
Abstain	0	N/A	2
Against	46		
Other	0		
Total	305	Total	305

In 47% of meetings we have cast one or more votes against management recommendation.

General Highlights

The role of financial institutions in addressing climate change

There is growing awareness among policymakers, investors, and in wider society that financial institutions need to reduce funding of activities that generate significant levels of greenhouse gas emissions. At the same time, they need to increase the financing of low-carbon solutions to facilitate the transition towards net zero emissions by 2050. This is echoed by the Paris Agreement, which explicitly recognizes the need to “make finance flows compatible with a pathway toward low greenhouse gas emissions and climate-resilient development”.

Moreover, the 2023 Intergovernmental Panel on Climate Change (IPCC) report highlights the urgency of near-term climate action and the need for improved access to financial resources. It stated that “if climate goals are to be achieved, both adaptation and mitigation financing would need to increase many-fold”. Finance has become a critical enabler for climate action and financial institutions need to incorporate climate change risks into their decision making. In response to these trends, investors have been placing increasing focus on the prominent role that financial institutions can play within the net zero transition. This has been evidenced through numerous collaborative initiatives, and also during this year’s proxy season, as investors showed strong support for shareholder proposals requesting reports on transition planning at the annual general meetings (AGMs) of banks.

During the 2023 proxy season, financial institutions were met with a significantly high number of shareholder proposals requesting additional action and disclosures on their climate impacts. Investors increasingly demand financial institutions to show how they are supporting the transition to net zero, and one of the most frequent requests made by shareholders has been the introduction of an annual management proposal outlining the company’s climate strategy – the ‘Say on Climate’. The introduction of this allows shareholders to hold companies accountable for their transition plans and helps them incentivize companies to develop and deliver clear action plans for financing the climate transition.

In the same vein, shareholders have also been asking companies to adopt a time-bound phase-out policy for lending and underwriting of new fossil fuel exploration and development. This aims to further support capital reallocation towards more sustainable solutions in line with the goals of the Paris Agreement. Lastly, another popular request made by shareholders concerns the adoption of science-based greenhouse gas emissions reduction targets, with the aim of pushing financial institutions to plan for and develop a clear path towards halving their financed emissions by 2030 and reaching net zero by 2050.

In line with growing shareholder expectations, several investor initiatives, such as the Institutional Investors Group on Climate Change (IIGCC) Banks Working Group, have gained prominence over the last few years. The working group was formed in April 2021 following the publication of a set of investor expectations for the banking sector, covering topics such as alignment with the goals of the Paris Agreement, governance of climate risk, and disclosures. Ever since then, the IIGCC has worked with the Transition Pathway Initiative Global Climate Transition Centre (TPI Centre) to further develop and refine investor expectations for banks. Most recently, this collaboration has resulted in the publication of a Net Zero Standard for Banks, which will enable investors to clearly assess and engage with banks on their net zero transition plans.

Based on the expectations of the IIGCC, Robeco has also developed a climate change assessment framework for the financial sector. Using this framework, we assess banks on several indicators of how well they are managing the net zero transition, including their net zero commitment, disclosure of short, medium and

long-term emissions reduction targets, their decarbonization strategy and climate governance, among other things. The outcomes of this assessment are not only used in our engagement activities, but also in our voting approach at the AGMs of the financial institutions under scope.

A negative assessment informs a vote against management on an appropriate agenda item. Through this integrated approach, our aim is to promote sustainable business practices in the financial sector and to encourage management to create long-term value, by avoiding climate-related risks and seeking out the opportunities of low carbon, sustainable development.
